

CHALOEMRAT HENGSAHATSAWAT — DEVOPS

SUMMARY

DevOps Engineer maintaining the Opstella DevSecOps platform across four Kubernetes clusters (observability, devops, nonprod, prod); responsible for monitoring platform health and resolving incidents within SLAs. Additionally manage and upgrade Kubernetes environments (OpenShift, RKE2) across Dev/Staging/Prod, validate changes in lab with defined rollback plans, monitor via Grafana, Prometheus, Graylog, and Elasticsearch, and perform continuous security patching/CVE remediation to maintain platform stability and security.

EXPERIENCE

DevOps Engineer (Full-time) — Opsta Company | May 2025 – Present, Bangkok

- Responsible for maintaining DevOps systems for clients and resolving issues according to SLA .
- Managing Kubernetes environments across various platforms including OpenShift and RKE2 .
- Troubleshooting performance issues of DevOps tools and upgrading systems from lab to production .
- Implementing logging system changes according to client requirements, testing in lab environments before production deployment .
- Perform security patching and CVE remediation across core systems to improve platform stability and security.
- Maintain and operate the Opstella platform across 4 clusters (observability, devops, nonprod, prod) and incident response under SLA.
- Resolved incidents present within SLA, conducted root cause analysis and implemented preventive actions to avoid recurrence.

DevOps Engineer Intern — Opsta Company | Nov 2024 – Apr 2025

- Performed scheduled OpenShift upgrades in staging and production clusters, ensuring SLA compliance.
- Migrated observability from ELK → Loki on OpenShift; deployed Grafana for monitoring logs and MinIO for backup storage.
- Managing Kubernetes environments across various platforms including OpenShift
- Upgraded and patched Grafana, Graylog, MongoDB, SonarQube for security and stability.
- Integrated Prometheus and Grafana for monitoring, alerting, and observability, including creating customized dashboards and fine-tuning PromQL queries to provide actionable insights.

SKILLS

- OpenShift, RKE2, Helm, Jenkins, Harbor, Docker, GitLab CI/CD, Grafana, Prometheus, Fluent Bit, Graylog, Elasticsearch, Go, Bash, JavaScript/TypeScript, Git

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA)
- Certified Kubernetes Application Developer (CKAD)

EDUCATION

Pibulsongkram Rajabhat University, B.Sc. Information Technology — Mar 2025
